

Equipment inspections

We recommend that the fall arrest system be periodically examined by a competent person for faults or damage that would render the system unsafe for use.

Hilsen periodic inspection services include providing you with manufacturer accredited inspectors on site, as well as tracking of your equipment on our *Hilsen Harness Control* tracking database.

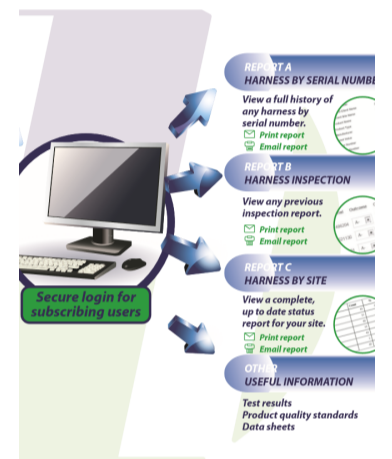

Hilsen inspections are conducted according to our own manufacturer inspection protocol and we provide full reporting as well as tagging of equipment as required.

Equipment inspections can be arranged through any approved distributor.

Equipment tracking

Hilsen use tracking software to record inspection data for each piece of equipment by serial number. Benefits include:

- Build a complete history on each piece of equipment
- Full traceability for incident reporting
- Track equipment from supply to withdrawal date
- Reporting on inventory and all previous inspections
- Archived inspection reports
- Remotely backed up virtual equipment register
- Usage reports by site or by employee
- Fault reports and remedial recommendations
- Comprehensive list of equipment by site

Inspection training and accreditation

Hilsen offer training for the person responsible for your in-house equipment inspections to ensure they are competent to inspect the equipment you are using.

Product presentations

Convenient on-site presentations on our products on topics including:

- Equipment overview
- Choice of equipment
- Correct fitment
- Equipment care and storage
- The basics of safe work at height
- Daily equipment checks and responsibility
- The risk of suspension trauma
- Using a harness step correctly
- What to do in an fall emergency
- Rescue expectations

Certified training for work at heights

Hilsen facilitate training on SETA Accredited work at heights training through one of our service partners. Options are listed here with more details available on request.

US ID 229998 Explain and perform fall arrest techniques when working at height
